Get Parents Involved

According to ISTE, more than 50% of students in grades 6-12 go online for homework help at least once a week.

Encourage parents to become involved in obtaining greater technology access for their children by being open about the results obtained from your most recent data collection. In addition, try these ideas for helping parents advocate for student access to technology:

- Send home reminders about upcoming school board meetings including location, times, and when to make their concerns heard.
- Provide a template for parents to contact local decision makers. Provide an addressed, stamped envelope for letters or an email address.
- Create a listserv with monthly communication about technology access at home and in schools. Be sure to include the CASE Infrastructure Report after each collection.
