3 Types of Volcanic Landforms

**Shield Volcano**
- Lava comes out of the volcano and gently flows down the slopes
- A wide dome shaped volcano formed from piled up lava flows
  - Example: Hawaii

**Cinder Cone Volcano**
- A small volcano formed from small rocks, ash, and cinders.
  - Examples: Capulin in Northern Mexico

**Composite Volcano (Stratovolcano)**
- A tall cone shaped volcano made of layers of ash and lava
  - Ex: Mt. Vesuvius, Italy
  - Mt. St. Helens, Washington State
  - Mt. Fuji, Japan

**Caldera**
- A wide crater caused by the collapse of a volcano
