

## TI-NSpire CX Calculator Quick Tips

Type of Problem	Calculator Keys	Notes	Example
Factoring or finding zeroes, solutions, x-intercepts, roots (factoring, quadratic equation, etc.)	<b>Menu - 3 - 3 - 1</b>	Gives you the "ROOTS" (zeroes/x-intercepts), so <b>opposite</b> factors  Ex. If you get an answer of 2, the factor is $(x - 2)$ . If you get an answer of $-1/2$ , the factor is $(2x + 1)$ .	1. $x^2 + x - 6$  2. $6x^2 - 5x - 4$
System of Equations LINEAR (substitution, elimination)	<b>Menu - 3 - 2</b>	Use the "=" button; Only works for LINEAR systems	1. $\begin{cases} -4x - 2y = -12 \\ 4x + 8y = -24 \end{cases}$  2. $\begin{cases} y = 7x - 19 \\ -2x + 3y = -19 \end{cases}$
System of Equations (graphing)	Graph both (use tab to graph more than one graph)  <b>Menu - 6 - 4 (intersect)</b> Scroll to left of point ENTER. Scroll to right of point ENTER. Point $(x, y)$ pops up!	Graphs must be in $y =$ form in order to graph	1. $\begin{cases} y = x - 11 \\ y = -2x + 19 \end{cases}$
Graphing zeroes, y-intercepts, min, max (vertex)	Graph equation  Menu - 5 - 1  <b>Graph trace</b>  Arrow keys until the <i>word</i> (min, max, y-intercept, zero, etc.) comes up		1. $y = -x^4 + x^3 + 2x^2$ Zeros: _____ y-intercept: _____ Maximum: _____ Minimum: _____  2. $f(x) = x^3 + x^2 - x - 2$ Zeros: _____ y-intercept: _____ Maximum: _____ Minimum: _____

<p>Regression</p>	<p>New Document Menu  4: Add Lists  In "A" box, title it "x" and then list your x data values below.  In "B" box, title it "y" and then list your y data values below.</p> <p>CTRL-doc for a new page</p> <p>5: Add Data  "Click to add variable" on bottom put "x" and on the left put "y"</p> <p>Menu - 4 - 6 -</p> <p>*Choose linear or quadratic based on the question</p>	<p>Decide if linear or quadratic by looking at the graph or see what question asks!</p>	<p>1. Find the <b>linear</b> equation that best represents the data below:</p> <table border="1" data-bbox="1057 212 1484 485"> <thead> <tr> <th>Age (x)</th> <th>Weight (y)</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>7.2</td> </tr> <tr> <td>3</td> <td>12.2</td> </tr> <tr> <td>6</td> <td>15.1</td> </tr> <tr> <td>9</td> <td>19.4</td> </tr> <tr> <td>12</td> <td>21.5</td> </tr> <tr> <td>15</td> <td>26.3</td> </tr> </tbody> </table> <p>Equation: _____</p>	Age (x)	Weight (y)	0	7.2	3	12.2	6	15.1	9	19.4	12	21.5	15	26.3
Age (x)	Weight (y)																
0	7.2																
3	12.2																
6	15.1																
9	19.4																
12	21.5																
15	26.3																
<p>Graph inequalities</p>	<p>On the graph page, delete the = sign by pressing the DELETE button, then choose &lt; &gt; ≤ ≥</p>	<p>Must be in y = form first (you might need to solve)</p> <p>*Don't forget to switch inequality when mult. or div. by negative number!!</p>	<p>Sketch the graph below:  1. <math>y &lt; 2x + 3</math></p> 														
<p>Standard deviation</p>	<p>4: Add Lists  Fill in x-values  Menu - 4 - 1 - 1</p>	<p>One-variable statistics  <math>\bar{x}</math> = mean  <math>\sigma</math> = standard deviation  MED = median  <math>\sigma^2</math> = variance</p>	<p>1. 1. 20, 30, 35, 24, 36, 47, 48  Mean: _____  Median: _____  Mode: _____  Range: _____  Standard Deviation: _____  Variance: _____</p>														

<b>ALGEBRA 2 ONLY</b> Normal Distribution probabilities	<b>Menu - 5 - 5 - 2</b> Lower limit Upper limit $\mu$ = mean $\sigma$ = standard deviation	Probability, distribution, normal Cdf  Lower limit – smaller number, left side Upper limit – bigger number, right side	1. X is a normally distributed variable with $\mu=30$ and $\sigma=4$ . Find: a. $P(x<35.2)$  b. $P(30< x <35)$  c. $P( x> 36)$
<b>ALGEBRA 2 ONLY</b> Permutations	Menu - 5 - 2 n , r	Use comma button bottom left	1. A team of 8 basketball players needs to choose a captain and co-captain. How many ways can they choose?
<b>ALGEBRA 2 ONLY</b> Combinations	Menu - 5 - 3 n , r	Use comma button bottom left	A team of 17 baseball players needs to choose three players to refill the water cooler. How many ways can they choose three players?

### Other helpful calculator keys to know!

Type of Problem	Calculator Keys	Notes
Fraction	CTRL ÷	
N <sup>th</sup> root $\sqrt[n]{x}$	CTRL ^	
i	Pi button on bottom left	
Absolute value $ x $	Button to the right of 9, 2 <sup>nd</sup> row, first button	
Convert to decimal	Menu - 2 - 1 (Number, convert)	OR: Put a decimal point after the fraction: ex. 2/3. ENTER
New page	CTRL - DOC	
Graph table of points	CTRL T	Scroll up/down for more
Graph more than one graph	Tab	
Skip between graphs (if more than one on the page)	Up/down arrow
