## Chart of Properties

| Property | Description | Algebra | Example |
| :---: | :---: | :---: | :---: |
| Commutative Property of Addition | the order in which you add two numbers doesn't matter | $a+b=b+a$ | $x+5=5+x$ |
| Commutative Property of Multiplication | the order in which you multiply two numbers doesn't matter | $\mathrm{a} \cdot \mathrm{b}=\mathrm{b} \cdot \mathrm{a}$ | $(x)(3)=3 x$ |
| Associative Property of Addition | the grouping of three numbers in a sum doesn't matter | $(\mathrm{a}+\mathrm{b})+\mathrm{c}=\mathrm{a}+(\mathrm{b}+\mathrm{c})$ | $(2 x+4)+1=2 x+(4+1)$ |
| Associative Property of Multiplication | the grouping of three numbers in a product doesn't matter | $(\mathrm{a} \cdot \mathrm{b}) \cdot \mathrm{c}=\mathrm{a} \cdot(\mathrm{b} \cdot \mathrm{c})$ | $(2 x) y=2(x y)$ |
| Identity Property of Addition | the sum of a number and 0 is the number | $a+0=a$ | $-6+0=-6$ |
| Identity Property of Multiplication | the product of a number and 1 is the number | $a \cdot 1=a$ | $1\left(\frac{3}{4}\right)=\frac{3}{4}$ |
| Inverse Property of Addition | the sum of a number and its opposite is zero | $a+(-a)=0$ | $12+(-12)=0$ |
| Inverse Property of Multiplication | the product of a non-zero number and its multiplicative inverse is 1 | $\mathrm{a} \cdot \frac{1}{a}=1$ | $3 \cdot \frac{1}{3}=1$ |
| Multiplicative Property of 0 | the product of a number and 0 is 0 | $a \cdot 0=0$ | $15 \cdot 0=0$ |
| Addition Property of Equality | any number added to one side of an equation must also be added to the other side | $\begin{aligned} a & =b \\ a+c & =b+c \end{aligned}$ | $\begin{aligned} x-4 & =16 \\ x-4+4 & =16+4 \end{aligned}$ |
| Subtraction Property of Equality | any number subtracted from one side of an equation must also be subtracted from the other | $\begin{aligned} a & =b \\ a-c & =b-c \end{aligned}$ | $\begin{aligned} x+17 & =-2 \\ x+17-17 & =-2-17 \end{aligned}$ |
| Multiplication Property of Equality | any number multiplied on one side of the equation must also be multiplied on the other | $\begin{aligned} a & =b \\ a \cdot c & =b \cdot c \end{aligned}$ | $\begin{aligned} \frac{x}{5} & =12 \\ \left(\frac{x}{5}\right)(5) & =(12)(5) \end{aligned}$ |
| Division Property of Equality | any number divided from one side of the equation must also be divided from the other | $\begin{aligned} & a=b \\ & \frac{a}{c}=\frac{b}{c} \end{aligned}$ | $\begin{aligned} & -3 x=57 \\ & \frac{-3 x}{-3}=\frac{57}{-3} \end{aligned}$ |
| Transitive <br> Property of Equality |  | $\begin{gathered} \text { If } \mathrm{a}=\mathrm{b} \text { and } \mathrm{b}=\mathrm{c} \text {, then } \mathrm{a} \\ =\mathrm{c} \end{gathered}$ | $\begin{gathered} \text { If } x=y-3 \text { and } y-3=8, \\ \text { then } x=8 . \end{gathered}$ |
| Reflexive <br> Property | a number equals itself | $\mathrm{a}=\mathrm{a}$ | $12=12$ |
| Symmetric Property |  | If $\mathrm{a}=\mathrm{b}$, then $\mathrm{b}=\mathrm{a}$ |  |

| Substitution <br> Property |  | If $\mathrm{a}=\mathrm{b}$, then a may be <br> replaced by b |  |
| :--- | :---: | :---: | :---: |
| Distributive <br> Property | used to find the product <br> of a sum or a difference | $\mathrm{a}(\mathrm{b}+\mathrm{c})=\mathrm{ab}+\mathrm{ac}$ <br> $(\mathrm{b}+\mathrm{c}) \mathrm{a}=\mathrm{ba}+\mathrm{ca}$ <br> $\mathrm{a}(\mathrm{b}-\mathrm{c})=\mathrm{ab}-\mathrm{ac}$ <br> (b-c)a$=\mathrm{ba}-\mathrm{ca}$ | $-2 x(x-4)=-2 x^{2}+8 x$ |
| Zero Product Property | If the product of two <br> terms or expression is 0, <br> then either of the terms or <br> expressions must equal 0. | If $(a)(b)=0$, <br> then $a=0$ or $b=0$. | If $(x-3)(x+7)=0$, then <br> $x-3=0$ or $x+7=0$. |
