2. What does research show about the benefits of language learning?

There is extensive brain research on the cognitive advantages of learning a second language. Here they have been divided into three major areas: academic achievement, cognitive benefits and affective growth.

A. Academic achievement: (Click on the statement to review the specific studies that support this claim.)

Language learning correlates with higher academic achievement on standardized test measures.
Language learning is beneficial to both monolingual English and English language learners in bilingual and two-way immersion programs.
Language learning is beneficial in the development of students’ reading abilities.
There is evidence that language learners transfer skills from one language to another.
There is a correlation between second language learning and increased linguistic awareness.
There is a correlation between language learning and students’ ability to hypothesize in science.
Language learning can benefit all students.
There is a correlation between young children’s second language development and the development of print awareness.
Heritage learners who use their language skills to interpret and translate for family members experience higher academic performance and greater self-efficacy.
There is a correlation between language study and higher scores on the SAT and ACT Tests.
There is a correlation between high school foreign language study and higher academic performance at the college level.

B. Cognitive benefits to students: (Click on the statement to review the specific studies that support this claim.)

There is evidence that early language learning improves cognitive abilities.
There is evidence bilingualism correlates with increased cognitive development and abilities.
There is a correlation between bilingualism and the offset of age-related cognitive losses.
There is a correlation between bilingualism and attentional control on cognitive tasks.
There is a correlation between bilingualism and intelligence.
There is a correlation between bilingualism and metalinguistic skills.
There is a correlation between bilingualism and memory skills.
There is a correlation between bilingualism and problem solving ability.
There is a correlation between bilingualism and improved verbal and spatial abilities.
