Students assist juried artists at the Waterford Fair on setup day (Thursday 9/30) or during the Fair (Fri-Sun, 10/1-10/3) and gain insight into the daily work of a practicing artist at a juried craft show. Students will assist with booth setup, sales transactions, answering customer questions, etc. Students will be paired with artists in requested mediums when possible, and will earn volunteer hours from the Waterford Foundation.

Partnership responsibilities: WF to match interested students with artists on requested days. Students should attend as a class with a teacher, or come on their own to the Fair providing their own transportation.

Deadline
Event takes place 9/30/21 - 10/3/21
As a class project, students will identify invasive species on the Phillips Farm, research suitable management practices, and develop a long-term plan for control of invasive plants on the farm.

WF staff or volunteers will work with the teacher to scope the class project appropriately for the school year and identify requirements for the management plan. The teacher will work with the class to identify and research the invasive species present on the farm and then help the students to create a plan for their control or eradication. WF will provide access to the farm for the class throughout the year when needed.
