

SunShine Math

Sunshine Math is a voluntary enrichment program for children K-5. It's sponsored by our PTA. The goal of the program is to encourage and foster reasoning and critical thinking skills in mathematics.

If your child's class is not already participating in Sunshine Math, you may simply download the weekly worksheets for your child's grade. Once the math sheets are completed, please ensure your child's name and teacher are clearly written on the page. Your child may place sheets in the Sunshine Math drop box located outside of the office. They will be collected, corrected and returned to your child's teacher for your review. Small incentives will be given to students for their participation.

Your role in Sunshine Math is to encourage and facilitate problem solving using manipulatives or suggested strategies. Please do not give answers, but questions may be read to children as needed. Also, please remind your child that he/she is NOT expected to know the answers to every question. This is merely an exercise in creative thinking strategies.

Please note that all information will be kept confidential. For questions/assistance with participation, contact Megan Cotterill, Sunshine Math Chair, megancotterill@outlook.com
